

# CASIO WATCH+ Quick Operation Guide

## STB-1000 and iPhone

As of Nov. 1, 2013

### Getting Ready

#### Supported Items

STB-1000

+

iPhone5s / iPhone5c/  
iPhone5 / iPhone4s

+

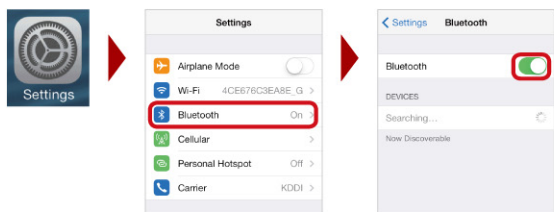

CASIO  
WATCH+

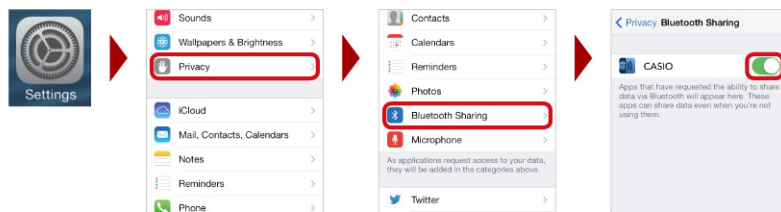

- CASIO WATCH+ app must be installed on the iPhone. Use to search for CASIO WATCH+ in App Store and install the app on your phone.
- Use the latest iOS version. If your phone has an older operating system, upgrade it.

On the iPhone settings screen, configure the settings below

■ [Settings] > [Bluetooth] > ON

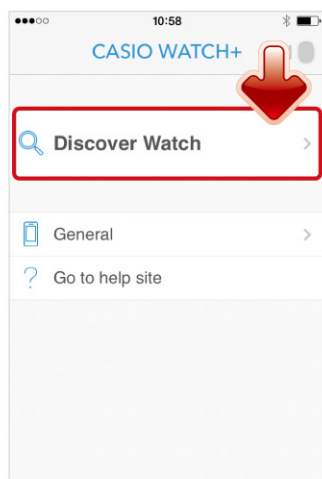

■ [Settings] > [Privacy] > [Bluetooth Sharing] > Turn on CASIO

## Pairing

### STEP 1

Start up the CASIO WATCH+ app and then tap [Discover Watch].

Tap here.

### STEP 2

When the message "Scanning" appears, hold down the watch's power button until the Bluetooth icon (📶) appears on the watch's display.

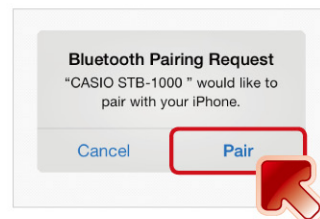

Hold down this button for about two seconds.

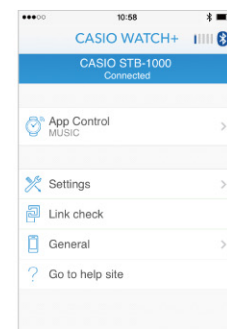

### STEP 3

Tap the watch model name and then tap [Pair].

\* Be sure not to touch the CASIO WATCH+ app screen while for the watch model name to appear on the display.

Pairing complete.

The top screen will re-appear when pairing is complete.

#### ■ When pairing is not successful

The watch returns to the Timekeeping Mode with the Bluetooth icon not displayed. In this case tap "Back" (once or as many times as necessary) in the upper left corner of the phone display to return to the top menu of the CASIO WATCH+ app, and then perform the above steps again starting from step 1.

# Re-Connecting

The link between the watch and phone may be lost whenever the distance between them becomes too great or if signal conditions becomes bad for some reason. If the link is lost, re-connect manually. Check the status of the Bluetooth icon (Ⓜ) on the watch display.

## Bluetooth Icon Status

Displayed

■ Connected (Mobile Link functions enabled.)

Flashing

■ The connection has been temporarily lost and the phone is searching for the watch. Move the watch closer to the phone and wait until a connection is re-established.

Not displayed

■ The connection between the watch and phone has been lost. Move the watch closer to the phone and then re-connect manually.

## Auto Reconnect

A flashing Bluetooth icon on the watch display indicates that it is in the process of automatically re-connecting with the iPhone. In the cases described below, the watch will attempt to re-connect automatically every minute for one hour only. Attempts to re-connect will stop after that.

### 1. Auto connect following Link Loss

Connection is re-established automatically within about one minute if you move the watch closer to the iPhone after Link Loss (momentary loss of communication between the watch and phone).

### 2. Auto connect following recovery from Power Saving

If the watch is not moved for more than about two hours while it is linked with the iPhone, it will enter a Power Saving state (indicated by a flashing PS indication). Moving the watch again while the iPhone is nearby will re-established the connection between them within about one minute. Note that connection will not be re-established automatically if the PS indicator is not flashing on the watch display.

## Manual Reconnect

If there is no Bluetooth icon on the watch display, it means the link between it and the iPhone is broken. If this happens, move the watch close to the phone and then perform one of the operations below to re-connect.

### To reconnect - 1

Hold down watch's POWER button for about two seconds.

### To reconnect - 2

Tap the [CASIO WATCH+] icon to re-start the app.

Hold down the watch's POWER button for about two seconds.

Perform "To reconnect - 2" in the following cases.

- After changing the phone's Airplane Mode setting
- After turning the phone's Bluetooth setting on or off
- After turning the phone off and then back on again

## Main Functions

- APP CONTROL
- Watch Settings
- Phone Finder
- Link Loss Alert
